INTRODUCTION

I am a young developer with three years of experience in the Full Stack world. I consider myself a curious person since I am always in a continuous search for self-improvement; "Life is what happens while you learn its meaning".

I am an open-minded person, I am always available to help. I am very resourceful and willing to work with my teammates and share my opinion when needed. I enjoy the work I do.

Besides the IT world, in my free time, I like finding information and learning about innovative technologies and curiosities about my professional field. In addition, I am also a musician, I play the bass, the Spanish guitar and the trombone. I am also a fantastic darts player.
